## BW4HANA Migration Project Premium Client Case Study

Digital transformation is one of the most scenarios that industries are adapting today, and at a much faster rate than ever. Moving to the latest versions and innovative databases such as SAP HANA is almost mandatory in today's times to keep up with the rapid adaption of scaling data scenarios. While ERP migrations see a lot more attention in terms of investment of time and effort, the data warehouse systems are usually assumed to be less critical. In our experience, this is by far on of those underestimated approach that result in repeated efforts. SAP BW4HANA is a data warehouse solution with agile and flexible data modeling, SAP HANA-optimized processes and state of the art user interfaces and which is highly optimized for the SAP HANA platform. SAP BW4HANA offers a managed approach to data warehousing.

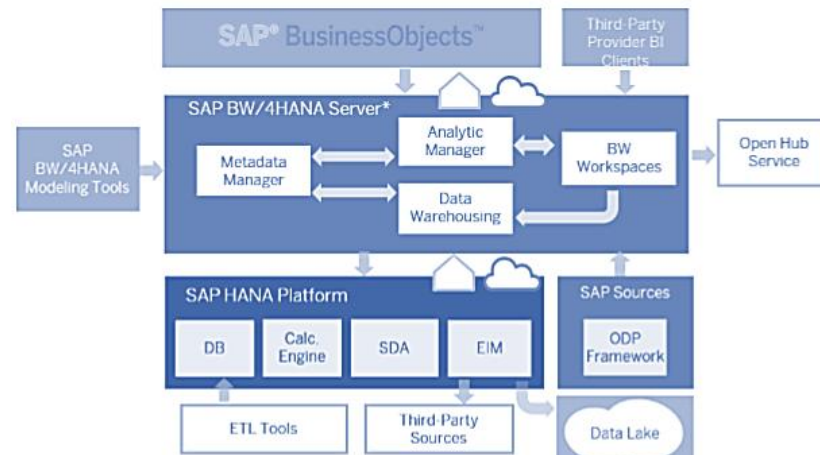

Madiba partnered with the client by defining their vision to transform data practices to gain the efficiency and agility to deploy live insights at larger scale. Key objective of the project was to drive digitization across all lines of business bringing silos of data(out of both SAP and non -SAP systems) to one Big Data warehouse ensuring high-performance decisive analytics and a platform for innovations along with SAP's other offerings such as SAC.

Team – 7 members | Timeline - 5 months | 3 Phases | 5 Agile Sprints

The key areas of SAP BW4HANA are data modeling, data procurement, analysis, together with agile access to information via BW Workspaces

- Data Modeling
- Data Analysis
- Data Acquisition
