Innovation. Agility. Experience

Are we on track to make our sales goals this period? What needs my attention in my finance organization?

Madiba's SNAP solution answers these types of questions by bringing SAP's S/4 managerial information to the Financial Executive's fingertips helping them make essential business decisions confidently.

Madiba has been focusing on improving and automating the underlying business processes as well as implementing decision making, planning and analytic solutions for more than 20 years. As an SAP partner and former auditors working with Finance Executives, we saw the need to connect the dots between the CFO's informational needs and data points in SAP.

As a result, we have developed SNAP for Finance Analytics, a preconfigured solution for companies using SAP S/4, allowing management to:

- Find meaningful insight from the abundance of data in SAP.
- Have transparency into the efficiency of finance processes.
- Interact easily and confidently with SAP information.
- Own a cost-effective solution for their finance team.
- Be assured of the accuracy of reports
- Reduce the need for external data marts.

Management by exception - *Getting out of the trees to see the Forest*

In developing SNAP, 33,000 data points in SAP were evaluated, allowing identification of the best methods to present the data for key performance indicators. Madiba's team of Certified Chartered Accountants, CPA's and former-CFO's assessed these data points and compiled a unique proprietary set of views that provides executive insight at a glance and highlight the particular item requiring attention. SNAP is built with a "less is more" approach for executive reporting with the option of additional detail, if needed.

It is common practice for financial analysts to export raw data from SAP and to then stitch it together for the summarized executive reporting. By nature, this is a labor-intensive exercise that may be repeatable but not readily available when needed.

Finance insights at your fingertips - *Executive Friendly*

Taking advantage of SAP's new robust reporting capability that provides financial insight in an easy to digest manner, SNAP is built on SAP's Analytics Cloud (SAC) platform making it easy to interact with financial insights on a **phone, mobile device or web browser**. SAC not only allows for actual analysis, but robust planning and predictive analytics.

In a survey 64% of CFO respondents confirmed that they struggle with data reporting and changes due to dependence on IT

SNAP for Finance Analytics

SNAP is an exclusive set of ready to use SAC Dashboards and Reports selected by combining more than 2 decades of experience and application of extensive SAP S/4 HANA knowledge as well as BEST PRACTICES.

SNAP leverages S/4 Reporting Queries in S/4 live – no reconciliation needed – as well as BW/AO queries in DW system directly.

SNAP has enhanced S/4 queries ready to address various common reporting issues. It is also possible to further enhance and customize the queries to specific needs of customer.

Is it time to move to S/4?

The numbers you see are true & live - *Getting out of the data moving business*

With significant advances in memory computing, SAP's S/4 underlying technology (HANA¹) has made it possible to eliminate the traditional replication of detailed data to external data warehouses for reporting. Although traditional data replication processes can be automated, there is always the inherent concern whether the reports reconcile to the official numbers in SAP or when the last data refresh completed. With SNAP, financial executives can see KPIs based on real-time data directly from the source (the SAP core system)

Get going in a SNAP - *Rapid activation*

Changing the current paradigm of expensive and long running finance data warehouse implementations, SNAP is a solution that can be quickly deployed and implemented at a surprisingly cost-effective price point with a low monthly subscription cost.

Analytical needs are often immediate as well as creative in nature and need to be addressed instantaneously.

Own a reporting solution for finance

SAP Analytics Cloud is a new generation of cloud analytics SaaS platform that provides modern as well as intuitive user experience to save time by planning, analyzing, predicting and collaborating in the context, whether your organization S/4 cloud/on premise or other.

SAP[®] Analytics Cloud

¹SAP S/4 HANA –*Latest intelligent ERP by SAP*

SAP S/4 HANA is a next-generation intelligent ERP by SAP that runs on the revolutionary in-memory database technology called HANA and has embedded machine learning capabilities to optimize financial processes.

SNAP is powered by SAC, S/4 HANA and Madiba's financial expertise.
